% Source: sources/sarol2024citationintegrity.pdf (PMC11231046.1 (published version); retrieved
%         2026-10-12) -- audited 2026-10-12
% [1] main.tex:29 -- SUPPORTED
%   Paper:  In an annotated corpus of 3,063 citations to 100 highly cited biomedical articles, about
%           39\% contained an accuracy error \citep{sarol2024citationintegrity}.
%   Claim:  Corpus of 3,063 annotated citations to 100 highly cited biomedical articles; ~39% had
%           accuracy errors.
%   Source: (p. 1, Abstract (Results)) "We manually annotated 100 highly-cited biomedical
%           publications (reference articles) and citations to them. ... A total of 3063 citation
%           instances were annotated (39.18% with accuracy errors)."
% [2] main.tex:37 -- PARTIAL
%   Paper:  On human-annotated biomedical citations, the best model reached 0.59 micro-F1
%           \citep{sarol2024citationintegrity}.
%   Claim:  On this corpus the best model achieved 0.59 micro-F1.
%   Source: (p. 1, Abstract (Results); see also Sec. 3, Table 4) "The best performing model-which
%           uses citation sentences as citation context, the BM25 model with MonoT5 reranker for
%           retrieving top-20 sentences, and a fine-tuned MultiVerS model for accuracy label
%           classification-yielded 0.59 micro-F1 and 0.52 macro-F1 score. GPT-4 in-context learning
%           performed better in identifying accurate citations, but it lagged for erroneous
%           citations (0.65 micro-F1, 0.45 macro-F1)."
%   Note:   0.59 micro-F1 is the authors' 'best performing' fine-tuned MultiVerS model, but it is
%           not the highest micro-F1 reported: GPT-4 in-context learning reached 0.65 micro-F1
%           (lower macro-F1, 0.45), and oracle models with gold evidence reached 0.73-0.75 micro-F1.
%           'Best' is the authors' overall/macro-F1 judgement, so quoting micro-F1 alone
%           misrepresents it. Suggested: 'On human-annotated biomedical citations, the authors'
%           best-performing model reached 0.59 micro-F1 and 0.52 macro-F1
%           \citep{sarol2024citationintegrity}.'
